Make in India Initiative

Source: Government of India scheme guidelines and Press Information Bureau releases (public information)

This document gives a short overview of Make in India Initiative.

Make in India was launched on 25 September 2014 to encourage companies to manufacture in India. The initiative initially focused on 25 sectors of the economy, including automobiles, aviation and electronics. The logo of the initiative is a lion made of gears, symbolising manufacturing strength.

The Department for Promotion of Industry and Internal Trade under the Ministry of Commerce and Industry leads the initiative. Key goals include increasing the manufacturing sector growth rate and creating jobs. Foreign direct investment limits were relaxed in several sectors, such as defence and railways, to attract investment.

The Production Linked Incentive scheme, announced in 2020, gives incentives based on incremental sales of goods made in India. The initiative is also linked to the Ease of Doing Business reforms to simplify rules for investors.
